GENERAL PRODUCT OVERVIEW

Retrofit Terminal Units

- Convert Constant Air Volume Systems to Variable Air Volume
 - Convert Constant Volume Dual Duct Systems to Variable Air Volume
 - Convert Multizone Systems to Variable Air Volume
 - Convert Mechanical Constant Volume Regulators to Low Pressure Pneumatic, Analog Electronic or Digital Controls.
- Nailor manufactures a range of standard and custom design retrofit terminal units for all applications.

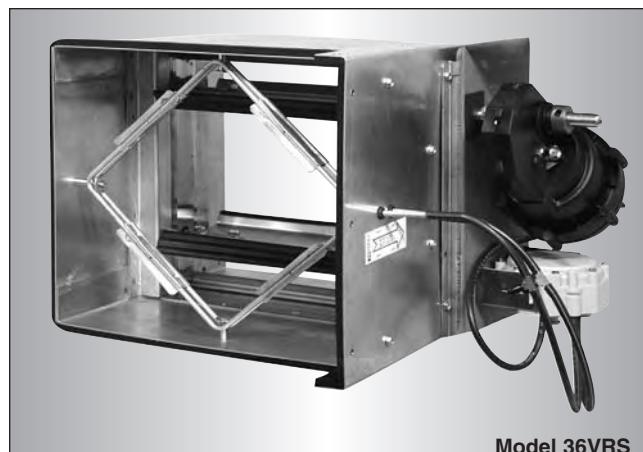

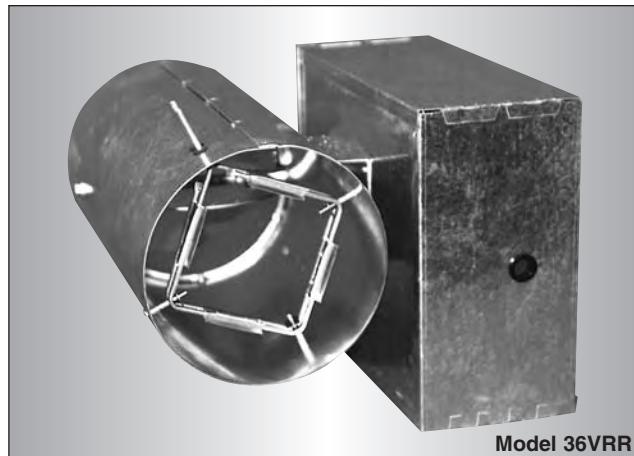

Round Duct External Retrofit Terminal Unit

Convert existing constant volume systems or old "system powered" mechanical regulator terminals to energy efficient variable volume operation.

- Available in 10 sizes to suit and install simply in round ductwork. 0 – 4050 cfm (0 – 1912 l/s).
- Various configurations custom fabricated to suit individual applications.
- Pressure dependent or independent airflow control.
- 'Diamond Flow' multi-point averaging flow sensor on pressure independent models.
- Pneumatic, electric, analog electronic or digital control.

Model 36VRR

See page E5

Internal Retrofit Terminal Units

Designed to replace the mechanical regulators in old "system powered" terminal units in order to substantially lower the operational static pressure requirement. The air valves include a damper, flow sensor and actuator and make use of state-of-the-art controls in order to reduce operating cost.

- Custom built on a specific project basis.
- Variable or constant volume pressure independent airflow control.
- 'Diamond Flow' multi-point averaging flow sensor.
- Models available to retrofit most 'brand name' mechanical regulator design terminal units.
- Pneumatic, analog electronic or digital control.

Model 36VR

RETROFIT TERMINAL UNITS

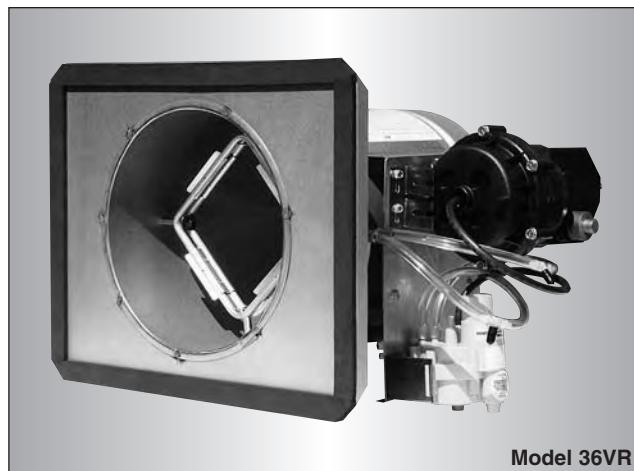

Rectangular Slide-in Retrofit Terminal Unit

Convert existing constant volume systems to energy efficient variable volume operation.

- Available in 15 valve sizes to handle a large range of air volumes. 0 – 15000 cfm (0 – 7080 l/s).
- Custom fabricated to suit any duct size from 5" x 5" (127 x 127) up to 52" x 26" (1321 x 660).
- 'Diamond Flow' multi-point averaging sensor.
- Pressure independent airflow control.
- Pneumatic, analog electronic or digital control.

Model 36VRS

See Page E10

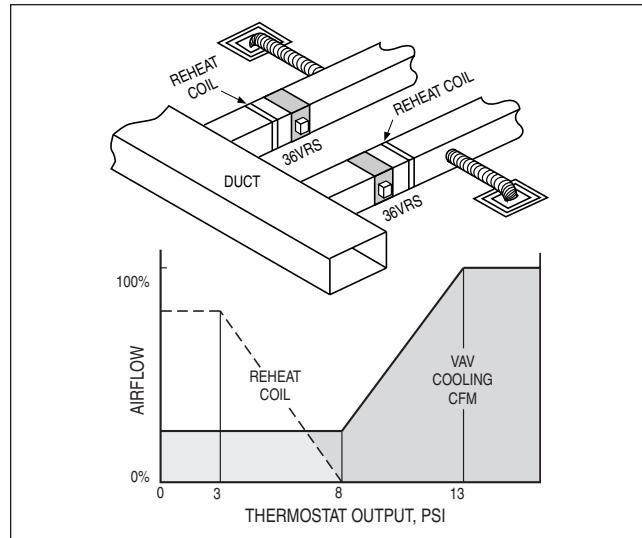

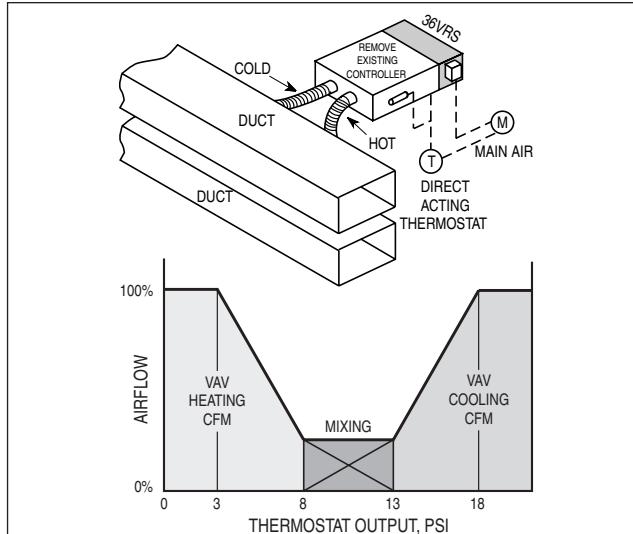

Some Typical Applications for the Model Series 36VR Retrofit VAV Terminals

Dual Duct System

Hot and cold air from the central station is distributed through the existing supply ducts and terminals. The **Series 36VR Retrofit Terminals** will convert the constant volume system to variable air volume pressure independent operation.

Remove the mechanical constant volume regulator from the existing terminal, while a **Model 36VRS** is installed in the discharge box or duct. A direct acting thermostat controls both the **36VRS** unit and the modulating tandem damper in the existing box. On a rise in room temperature, the **36VRS** reduces the hot airflow. At the minimum setting, the damper in the existing terminal begins to modulate, and mixing occurs. A further temperature rise increases the cold airflow to the maximum.

The fan capacity may be reduced down since the total air volume is reduced.

Multizone System

Hot or cold air from the central station multizone air handler is distributed through the existing zone system. The **Series 36VR Retrofit Terminals** will convert the multizone system to variable air volume operation.

The zone dampers in the central station air handler are made with two-position actuators; each zone is fully open, either heating or cooling. There is no mixing. (Controls may be selected for an outdoor thermostat, a manual selector or changeover signal.)

A dual function thermostat in each zone is direct acting for cooling, reverse acting for heating. In response to the room temperature, the thermostat resets the velocity controller for pressure independent control of the **Series 36VR**.

The fan capacity may be reduced since the total air volume is reduced.

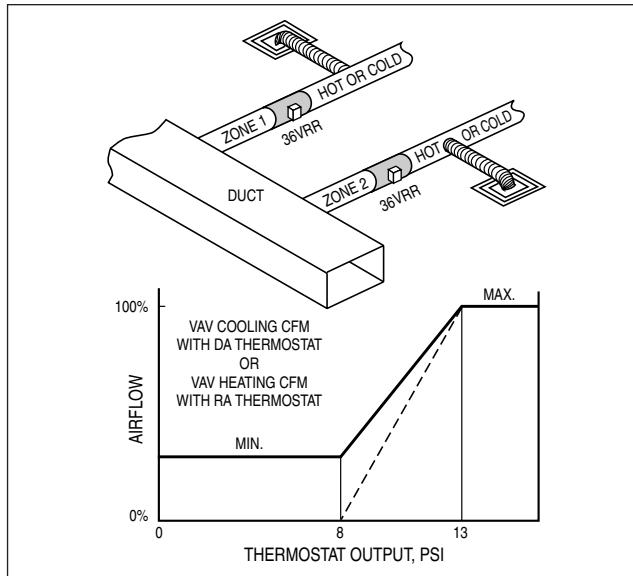

Constant Volume Reheat System

Cold air from the central station is distributed through the existing main trunk and branch ducts. The **Model 36VRS Retrofit Terminals** will convert the constant volume system to pressure independent variable air volume operation.

Each **36VRS** terminal is signalled by a direct acting thermostat. The pressure independent minimum airflow is set at a thermostat output pressure of 8 psi or less, while the maximum is set at 13 psi or greater.

The existing reheat coil in each zone is actuated on a fall in room temperature, as the thermostat output decreases from 8 to 3 psi.

The fan capacity may be reduced since the total air volume is reduced.

ROUND EXTERNAL DUCT RETROFIT TERMINAL UNIT

MODEL 36VRR

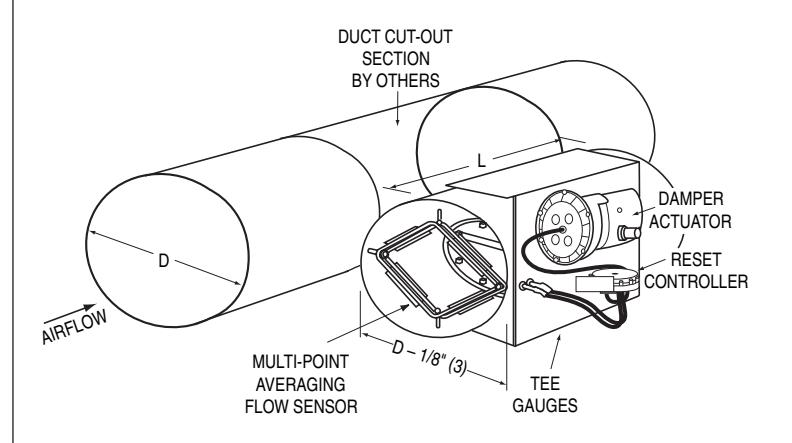

- VARIABLE AIR VOLUME CONVERSION

Model 36VRR is designed for round ductwork retrofit application. Terminals are available in 10 sizes and are nominally undersized to ensure a good fit.

Easy, low-cost installation into existing ductwork. The installer cuts out a section in the round duct and replaces the duct section with the conversion unit.

FEATURES:

- Casing 22 ga. (0.86), corrosion-resistant steel with stiffening beads. Size 14 and 16 are 20 ga. (0.91).
- Blade: Two layers of 22 ga. (0.86), corrosion-resistant steel laminated together (equivalent to 16 gauge) with a cross-linked polyurethane peripheral gasket for tight shut-off, 90° rotation, CCW to open. Damper leakage is less than 2% of nominal CFM @ 6" w.g. as tested in accordance with ANSI/ASHRAE Standard 130.
- Bearing: Self-lubricating oilite bronze.
- Drive Shaft/Axes: 1/2" (13) diameter plated steel, double-bolted to blades. Indicator mark on the end of the shaft to show damper position.
- Full electrical controls enclosure for factory mounted DDC and analog electronic controls.
- Multi-point averaging 'Diamond Flow' sensor: Aluminium.

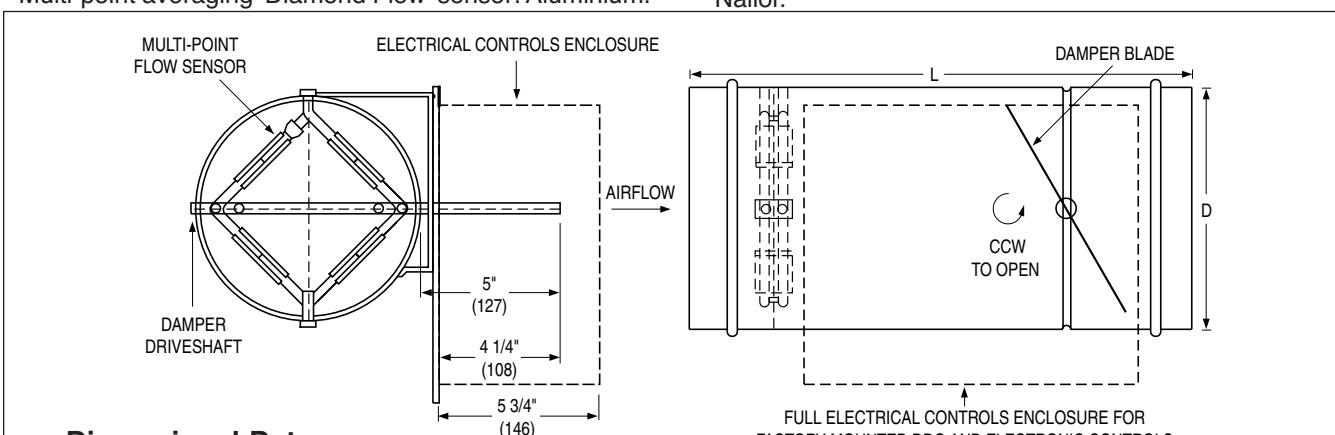

Gauge taps are provided for field balancing when controls are factory mounted.

- Right-hand control location is standard (as shown). Left-hand is optional.

Options:

- Available in Type 304 and 316 stainless steel construction for laboratory/fume hood exhaust applications.
- Controls enclosure for field mounted controls.
- 24 volt control transformer.
- Toggle disconnect switch.
- Pneumatic or Analog Electronic Pressure Independent controls by Nailor. Factory mounted and calibrated.
- Digital controls by BMS Contractor. Factory mounted by Nailor.

16	0 - 1912	403	559

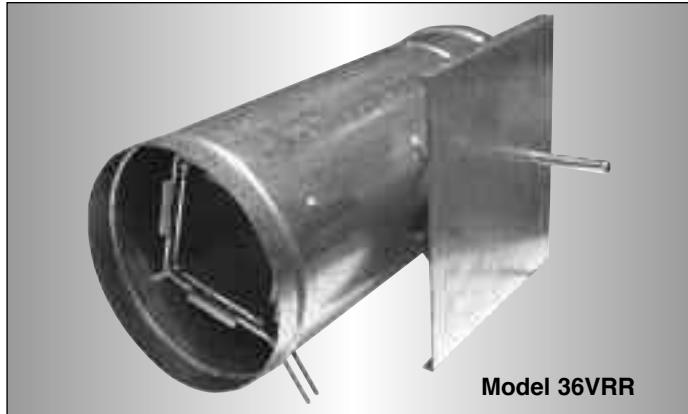

* Size 4 & 5 are supplied as a size 6 valve with reducers at both ends.

Recommended Airflow Ranges For Model 36VRR Round Retrofit Terminal Units

The recommended airflow ranges below are for round duct terminal units with pressure independent controls and are presented as ranges for total and controller specific minimum and maximum airflow. Airflow ranges are based upon maintaining reasonable sound levels and controller limits using Nailor's Diamond Flow Sensor as the airflow measuring device. For a given unit size, the minimum, auxiliary minimum (where applicable) and the maximum flow setting must be within the range limits to ensure pressure independent operation, accuracy and repeatability.

Minimum airflow limits are based upon .02" w.g. (5 Pa) differential pressure signal from Diamond Flow Sensor on analog/digital controls and .03" (7.5) for pneumatic controllers. This is a realistic low limit for many transducers used in the digital controls industry. Setting airflow minimums lower, may cause damper hunting and result in a failure to meet minimum ventilation requirements. Factory settings will therefore not be made outside these ranges; however, a minimum setting of zero (shut-off) is an available option on pneumatic units. Where an auxiliary setting is specified, the value must be greater than the minimum setting.

The high end of the tabulated Total Airflow Range on pneumatic and analog electronic controls represents the Diamond Flow Sensor's differential pressure reading at 1" w.g. (250 Pa). The high end airflow range for digital controls is represented by the indicated transducer differential pressure.

AHRI Standard 880 "Performance Rating of Air Terminals" is the method of test for the certification program. The "standard rating condition" (certification rating point) airflow volumes for each terminal unit size are tabulated below. These air volumes equate to an approximate inlet velocity of 2000 fpm (10.2 m/s). When digital or other controls are mounted by Nailor, but supplied by others, these values are guidelines only, based upon experience with the majority of controls currently available. Controls supplied by others for factory mounting are configured and calibrated in the field. Airflow settings on pneumatic and analog controls supplied by Nailor are factory preset when provided.

Performance Notes:

1. NC levels are calculated from the published raw data and based on procedures outlined in Appendix E, ARI 885-98.

2. Discharge sound attenuation deductions are based on environmental effect, duct lining, branch power division, insulated flex duct, end reflection and space effect and are as follows:

Radiated attenuation	Octave Band					
	2	3	4	5	6	7
< 300 cfm	24	28	39	53	58	40
300 – 700 cfm	27	29	40	51	53	39
> 700 cfm	29	30	41	51	52	39

Total dB reduction	Octave Band					
	2	3	4	5	6	7
18	19	20	26	31	36	

4. Min. inlet ΔPs is the minimum static pressure required to achieve rated airflow (damper full open).

5. Dash (-) in space denotes an NC level of less than 20.

6. For a complete explanation and details on NC calculations, refer to page B9 and the engineering section of this catalog.

Performance Notes:

1. Discharge sound power is the noise emitted from the unit discharge into the downstream duct.
2. Sound power levels are in decibels, dB re 10^{-12} watts.
3. All sound data listed by octave bands is raw data without any corrections for room absorption or duct attenuation.
4. Min. inlet ΔPs is the minimum operating pressure requirement (damper full open).
5. Data derived from tests conducted in accordance with ANSI/ASHRAE Std. 130-1996 and ARI Standard 880-98.

Performance Notes:

1. Radiated sound power is the breakout noise transmitted through the unit casing walls.
2. Sound power levels are in decibels, dB re 10⁻¹² watts.
3. All sound data listed by octave bands is raw data without any corrections for room absorption or duct attenuation.
4. Min. inlet ΔPs is the minimum operating pressure requirement (damper full open).
5. Data derived from tests conducted in accordance with ANSI/ASHRAE Std. 130-1996 and ARI Standard 880-98.

SLIDE-IN RETROFIT TERMINAL UNIT MODEL 36VRS

- SQUARE OR RECTANGULAR
- VARIABLE AIR VOLUME CONVERSION

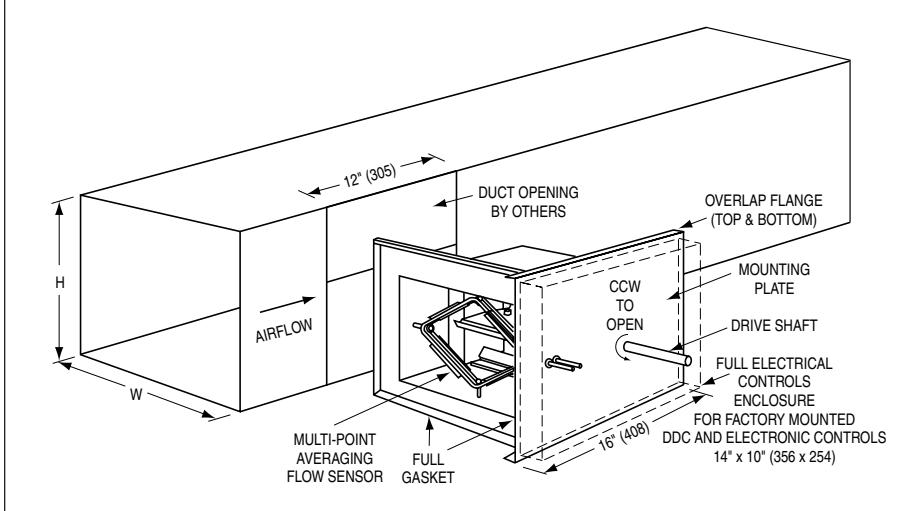

A slide-in type Retrofit Air Terminal Unit for square or rectangular ductwork. Converts constant volume systems to variable air volume. Available in 15 individual valve sizes up to 15,000 cfm. Nominal valve size is the same as smallest available duct size in table.

Each unit (valve) size is available to suit various duct sizes as shown in the table. Top, bottom and/or side blank-off plates are used to bring valve up to the required nominal ductwork dimension. Airflow ranges are based on valve size and acoustical considerations for duct velocity. Model 36VRS units are available to suit duct sizes within the tabulated range in 1" (25) increments.

Simple, low cost installation into existing ductwork. The installer cuts a rectangular hole in the side of the duct, cuts away the insulation (where present), slides the unit into the duct and screws the mounting plate to the side of the duct.

E

RETROFIT TERMINAL UNITS

FEATURES:

- Damper: 16 ga. (1.6) galvanized steel blade and frame construction with extruded PVC blade seals and metallic side jamb seals. Leakage is less than 2% of nominal CFM @ 3.0" w.g. as tested in accordance with ASHRAE Standard 130.
- Bearings: Celcon®.
- Drive Shaft: 1/2" (13) dia. plated steel, double-bolted to blade. Indicator mark on the end of the shaft to show damper position. 90° rotation. CW to close.
- Full electrical controls enclosure for factory mounted DDC and analog electronic controls.
- Multi-point averaging 'Diamond Flow' sensor: Aluminum. Gauge taps are provided for field balancing

when controls are factory mounted.

- Gasket under the mounting plate and around periphery of terminal insert seal the unit to the sides of the duct.

Options:

- Controls enclosure for field mounted controls.
- 24 volt control transformer.
- Toggle disconnect switch.
- Pneumatic or Analog Electronic Pressure Independent controls by Nailor. Factory mounted and calibrated.
- Digital controls by BMS Contractor. Factory mounted by Nailor.

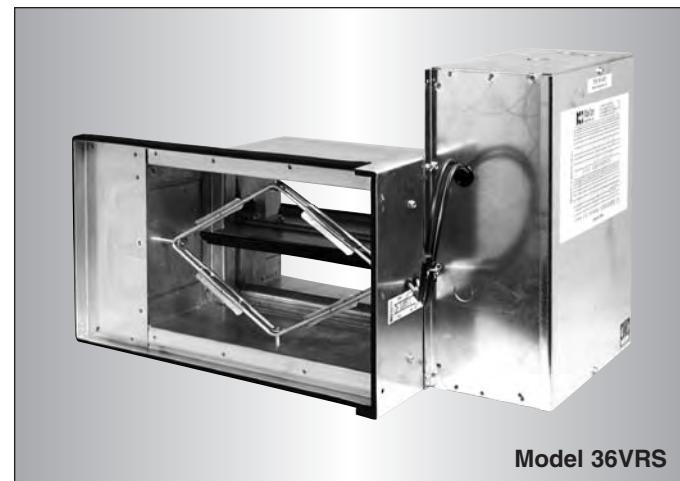

Dimensional Data:

Unit (valve) Size	Available Duct Size Width x Height	
	inches	mm
7	5 x 5 to 12 x 8	127 x 127 to 305 x 203
8	6 x 6 to 12 x 10	152 x 152 to 305 x 254
9	8 x 6 to 16 x 10	203 x 152 to 406 x 254
10	10 x 8 to 18 x 12	254 x 203 to 457 x 305
11	14 x 8 to 22 x 12	356 x 203 to 559 x 305
11A	18 x 6 to 26 x 10	457 x 152 to 660 x 254
12	12 x 10 to 22 x 14	305 x 254 to 559 x 356
13	18 x 10 to 28 x 14	457 x 254 to 711 x 356
14	18 x 12 to 28 x 16	457 x 305 to 711 x 406
15	20 x 14 to 30 x 18	508 x 356 to 762 x 457
15A	30 x 12 to 36 x 16	762 x 305 to 914 x 406
16	22 x 16 to 36 x 20	559 x 406 to 914 x 508
17	24 x 18 to 36 x 26	610 x 457 to 914 x 660
18	30 x 20 to 46 x 26	762 x 508 to 1168 x 660
19	40 x 20 to 52 x 26	1016 x 508 to 1321 x 660

Recommended Airflow Ranges For Model 36VRS Slide-in Retrofit Terminal Units

The recommended airflow ranges below are for terminal units with pressure independent controls and are based upon controller sensitivity limits as shown for each control type and acoustical consideration for duct velocity. For a given unit size, the minimum, auxiliary minimum (where applicable) and the maximum flow settings must be within the range limits to ensure pressure independent operation, accuracy and repeatability. For these reasons, factory settings will not be made outside these ranges. A minimum setting of zero (shut-off) is also available. Where an auxiliary setting is specified, the value must be greater than the minimum setting.

When digital or other controls are mounted by Nailor, but supplied by others, these values are guidelines only, based upon experience with the majority of controls currently available. Controls supplied by others for factory mounting are configured and calibrated in the field.
