

*“Save time and money with less pieces to unload, distribute and (most importantly) install.”*

## **Put together, so you don't have to**

You know that labor is a major part of the expenses associated with installing ductwork. To be competitive, you need every advantage you can get.

Our manifolded product offers you the advantage of fewer pieces, fewer field joints and fewer cuts, thus saving you valuable time in the field. Since time is money, you'll realize more profit on each job.

Fewer pieces on a jobsite means instant labor savings through material handling, as well as, fewer pieces to cut, hang, and seal. Additionally, the longer lengths of manifolded duct will require fewer lift, ladder, and scaffolding set-ups.

On top of all of the labor savings, a manifolded duct system with fewer field joints will reduce the leakage associated with field installation of taps and fittings.

For your next manifolded duct application, remember “We make it easy” at SEMCO Duct & Acoustical Products Incorporated.

## **Features**

Factory installed taps and fittings  
LEED certified low emitting sealants

## **Benefits**

Easier to work with in limited space areas  
Fewer pieces to handle save time and money  
Fewer field joints to cut & seal reduces installation time  
Low air leakage

## **Materials available**

Aluminum  
Black iron  
Galvanized steel  
Stainless steel

## **Options and accessories**

Available in single & dual wall round and oval  
AVRON46® antimicrobial coating  
Largest variety of proprietary joint connectors available  
Velocity™ self-sealing joint connection
